

Web Architect - Implementation

About this role

OptiMargin is looking for fantastic makers to join our Solutions team — individuals who are world class in identifying and unpacking the key problems that plague margin overcharging clutters balance sheets. As a Web Architect focused on client implementations, you will be responsible for creating and implementing all our sites. The candidate should stay current in the states of the modern frameworks to make sure the architecture fits all our needs and stays robust and scalable. The candidate may also oversee personnel and determine what code will be utilized in frameworks. This position requires a bachelor's degree in computer science or a related field. The proposed architecture must be scalable, testable, robust.

What you'll be working on

- Providing guidance for the architectural planning for frameworks
- Run a tight project, managing internal and external team members and driving milestones forward.
- Creating technical literature, such as training materials or sample code, to encourage acceptance of frameworks
- Ensuring system integrity by utilizing proper architectural designs
- Giving status reports to management on the current status of frameworks
- Creating the automated testing process/methodology
- Capture and synthesize product feedback related to a given solution, making recommendations that increase their appeal or usability.

Thing you're skilled in

- The front-end expertise is a must; full stack expertise preferred
- Track record of building useful tools, either for your own productivity or for the needs of your team
- Experience working alongside sales and account management teams to develop solutions for clients.
